

Global Connect

Global Connect allows you to send standard and premium rate communications to your clients or staff across almost every mobile network around the globe.

The Product

Often, our clients have their own web or mobile applications, but lack access to the mobile networks around the world to get maximum effectiveness from those applications.

Sonic Global Connect is the solution that allows you to send mobile based communications to most mobile networks by providing you with API access to our mobile gateways with message handling via the Sonic Fusion Engine with web based management through Omniscience.

Global Connect also provides an enhanced level of connectivity to selected mobile networks including delivery receipts, cross carrier short codes, premium rate messaging and reply paths all managed through our web based platform.

How does it work?

Global Connect provides access to Sonic Mobile's infrastructure at a wholesale level with enhanced functionality.

Through a simple online sign up process, we establish a gateway account for basic connectivity and then you select the countries in which you require short codes or enhanced functionality. Global Connect accounts also incorporate all of the functionality from SMS direct services which will enable you to broadcast or push to all of our connected networks as standard.

Sonic Mobile can also provide cross carrier short codes and premium rate messaging across most networks for more complex requirements, with codes usually provisioned within 2-8 weeks (Depending on country).

From here, a simple in house integration project from your team will connect your systems to the Sonic Mobile API. We provide comprehensive documentation to assist you to connect to our SOAP gateway or we can provide hands on assistance on a consultancy basis.

Why do I need it?

Sonic Global Connect is the perfect solution for companies or individuals who have the knowledge and expertise required to create their own mobile applications, but cannot access the mobile infrastructure required to deliver messages to global mobile users.

Global Connect provides you with an easy-to-use interface with our gateway and secure interconnection options between your application and Sonic.

If you require a more sophisticated interface or functionality, such as dedicated servers or data circuits to support an enterprise solution, we can help you with all of your requirements.
